

# App: Flow: Phase #1

Date: Feb 27th, 2023

Domain: <https://flow.brickmmo.com>

GitHub: <https://github.com/BrickMMO/flow-v1>

## Application Purpose:

This application will provide BrickMMO developers with a place to login and receive their daily tasks and deadlines.

This application will intentionally be written in a simplified structure with a simple stack.

Here are some rules for continued development:

- Languages will include HTML, minimal CSS, and vanilla PHP
- Validation is server-side and will simply not add the record if there is an error, it will not display specific errors, or provide a chance to fix errors
- No libraries, frameworks, or JavaScript
- Icons use simple HTML entities (<https://www.toptal.com/designers/htmlarrows/symbols/>)

This will provide BrickMMO developers with a simple application to contribute to once they have some understanding of server-side languages such as PHP.

## Front-End:

There will be no front-end for this application. All data will be behind a student and admin login. There will however be a GitHub repository to store full tasks descriptions in Markdown:

<https://github.com/BrickMMO/tasks>

## Back-End:

The backend will include a login area for students and one for admin:

### Students:

- Login to application (registration, login, forgot password)
- Dashboard
- Toggle between classes
- View existing tasks, details, and deadlines
- Mark tasks as complete

- Make notes for each task

Flow Login

Welcome to the BrickMMO project management application.  
Login using your Humber email address:

Email:  
thomasadam83@hotmail.com

Password:  
\*\*\*\*\*

Login

[Forgot Password](#) | [Register](#)

## Admin:

- Login to application (login, forgot password)
- Dashboard
- Manage classes, tasks, students, and notes
- Import users into classes, assign tasks

## API:

This application will not require an API in version one.
